

## SECURED PAYMENT

Update date: 21-10-2022

To allow you a secure, simple, and immediate purchase, we made the choice to offer you a wide panel of payment by bank card. You can use the following payment methods (Credit cards): Visa - Verified by VISA, Mastercard - Mastercard SecureCode.

Your payment is made directly on the secure server of our banking partner, with a secure connection using the SSL (Secure Socket Layer) encryption process, which is the most widely used encryption protocol in the world.

The address of the payment page contains HTTPS://. The "S" confirms that the page is secure.

In addition, a padlock appears at the bottom of the page or in the navigation bar, depending on the Internet browser you are using, to also confirm secure protection.

This ensures that your personal information remains strictly confidential and is fully encrypted during all stages of the payment process, thus avoiding any risk of computer hacking.

Once the transaction is accepted by your bank, your order is validated and you receive an email summarizing it.

**Your absolute satisfaction is the number 1 objective of our security and confidentiality approach.**

If you wish, for more details on our security and confidentiality approach, you can also consult our General Terms of Use and Sale, as well as our Confidentiality Charter available in the corresponding sections of the Site.
